**Abstract:** The rhizomes of dried *Hedychium flavum* were crushed, extracted with industrial methanol. The extract was dissolved with water and then extracted with ethyl acetate. The ethyl acetate part was separated by gel column chromatography and HPLC. Four diarylheptanes were obtained and identified by NMR, and the compounds were identified as 1,7-bis(4-hydroxy-3-methoxyphenyl)heptane-3,5-diol (**1**), 5-hydroxy-1-(4'-hydroxyphenyl)-7-(4''-hydroxy-3''-methoxyphenyl)-3-heptanone (**2**), gingenone A (**3**) and coriandralpinin C (**4**). All the compounds were isolated for the first time from *Hedychium flavum*.

**Keywords:** *Hedychium flavum*; chemical composition; diaryl heptane compound
